

SAMPLE FORM

INTRODUCTION

This document contains a complete set of sample input forms (10) and output reports (12) for the SACCO Core Banking System. Together they illustrate every major user interaction and management report required by the system – from member on-boarding to loan tracking and branch performance analysis.

✧ INPUT FORMS

The input forms cover the entire operational workflow: member and staff registration (forms 1-3), loan product definition (form 4), loan application and support (forms 5-7: application, guarantor, collateral), financial transactions (forms 8-9: repayment schedule and general transaction), and savings account opening (form 10). Each form includes field labels, data types, required/optional indicators, and a visual mock-up. These can be directly used by front- end developers to build the actual user interface.

✧ OUTPUT REPORTS

The reports deliver actionable insights for loan officers, branch managers, and SACCO executives. Member- centric reports include loan statement, repayment schedule, and savings statement. Risk and monitoring reports cover overdue loans, collateral register, and approval queue. Staff and operations reports include staff by branch, daily transaction log, and member directory. Strategic analytic reports include branch performance summary, guarantor summary, and loan product popularity. Each report shows column headings, sample data rows, and total summaries – ready to be converted into SQL queries or front- end tables.

✧ ALIGNMENT WITH DATABASE DESIGN

All forms and reports are based on the relational (MySQL) and MongoDB scheme defined in the project ERD. Key tables used include MEMBER, STAFF, BRANCH, LOAN_PRODUCT, LOAN, LOAN_GUARANTOR, COLLATERAL, LOAN_TRANSACTION, LOAN_REPAYMENT_SCHEDULE, and SAVINGS_ACCOUNT. The corresponding SQL queries for each report are available in report_queries.SQL.

✧ HOW TO USE THIS DOCUMENT

Stakeholder review: present these mock-ups to confirm functional requirements before coding. Front- end implementation: use the field lists and layouts as UI specifications. Testing: compare actual system outputs against the sample report tables.
